Corporate Update

Improving Productivity and Safety With Innovation

Cautionary Statements

NYSE:HL

Cautionary Statement Regarding Forward Looking Statements,

This presentation contains "forward-looking statements" within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended, which are intended to be covered by the safe harbor created by such sections and other applicable laws, including Canadian Securities laws. Such forward-looking statements may include, without limitation: (i) estimates of future production and sales, including as a result of the #4 Shaft Project; (ii) estimates of future costs and cash cost, after by-product credits per ounce of silver/gold, including the expected cost of the #4 Shaft project; (iii) guidance for 2017 including the impact of the Lucky Friday strike on silver and gold production, silver equivalent production, cash cost, after by-product credits, capital expenditures and pre-development and exploration expenditures (which assumes metal prices of gold at $1,225/oz., silver at $17.25/oz., zinc at $1.30/lb. and lead at $1.05/lb. and USD/CAD assumed to be $0.78, USD/MXN assumed to be $0.06); (iv) expectations regarding the development, growth and exploration potential of the Company's projects; (v) expectations of adding reserves and resources; (vi) expected level of hydroelectric usage at Greens Creek; (vii) the possibility of increasing production due to accessing higher grade material and surface pits at Casa Berardi; (viii) possible strike extensions of veins at San Sebastian and estimates of mining, grade, recovery, free cash flow, mine life, IRR, ability to reactivate existing mill permits, production of silver, gold and silver equivalent ounces, ability to extend mine life past 18 months; (ix) expectations of grade increases at depth at Lucky Friday and (x) estimates or expectations of future events or results are based upon certain assumptions, which may prove to be incorrect. Such assumptions, include, but are not limited to: (i) there being no significant change to current geotechnical, metallurgical, hydrological and other physical conditions; (ii) permitting, development, operations and expansion of the Company's projects being consistent with current expectations and mine plans; (iii) political/regulatory developments in any jurisdiction in which the Company operates being consistent with its current expectations; (iv) the exchange rate for the Canadian dollar to the U.S. dollar, being approximately consistent with current levels; (v) certain price assumptions for gold, silver, lead and zinc; (vi) prices for key supplies being approximately consistent with current levels; (vii) the accuracy of our current mineral reserve and mineral resource estimates; and (viii) the Company's plans for development and production will proceed as expected and will not require revision as a result of risks or uncertainties, whether known, unknown or unanticipated. Where the Company expresses or implies an expectation or belief as to future events or results, such expectation or belief is expressed in good faith and believed to have a reasonable basis. However, such statements are subject to risks, uncertainties and other factors, which could cause actual results to differ materially from future results expressed, projected or implied by the "forward-looking statements." Such risks include, but are not limited to gold, silver and other metals price volatility, operating risks, currency fluctuations, increased production costs and variances in ore grade or recovery rates from those assumed in mining plans, community relations, conflict resolution and outcome of projects or oppositions, litigation, political, regulatory, labor and environmental risks, and exploration risks and results, including that mineral resources are not mineral reserves, they do not have demonstrated economic viability and there is no certainty that they can be upgraded to mineral reserves through continued exploration. For a more detailed discussion of such risks and other factors, see the Company's 2016 Form 10-K, filed on February 23, 2017 with the Securities and Exchange Commission (SEC), as well as the Company's other SEC filings. The Company does not undertake any obligation to release publicly revisions to any "forward-looking statement," including, without limitation, outlook, to reflect events or circumstances after the date of this presentation, or to reflect the occurrence of unanticipated events, except as may be required under applicable securities laws. Investors should not assume that any lack of update to a previously issued "forward-looking statement" constitutes a reaffirmation of that statement. Continued reliance on "forward-loo king statements" is at investors' own risk.

Cautionary Note Regarding Estimates of Measured, Indicated and Inferred Resources

The United States Securities and Exchange Commission (SEC) permits mining companies, in their filings with the SEC, to disclose only those mineral deposits that a company can economically and legally extract or produce. We use certain terms in this presentation, such as "resource," "measured resources," "indicated resources," and "inferred resources" that are recognized by Canadian regulations, but that SEC guidelines generally prohibit U.S. registered companies from including in their filings with the SEC, except in certain circumstances. U.S. investors are urged to consider closely the disclosure in our most recent Form 10-K and Form 10-Q. You can review and obtain copies of these filings from the SEC's website at www.sec.gov.

Qualified Person (QP) Pursuant to Canadian National Instrument 43-101

Dean McDonald, PhD. P.Geo., Senior Vice President - Exploration of Hecla Mining Company, who serves as a Qualified Person under National Instrument 43-101("NI 43-101"), supervised the preparation of the scientific and technical information concerning Hecla's mineral projects in this presentation. Information regarding data verification, surveys and investigations, quality assurance program and quality control measures and a summary of analytical or testing procedures for the Greens Creek Mine are contained in a technical report titled "Technical Report for the Greens Creek Mine" effective date March 28, 2013, and for the Lucky Friday Mine are contained in a technical report titled "Technical Report for the Lucky Friday Mine Shoshone County, Idaho, USA" effective date April 2, 2014, for Casa Berardi are contained in a technical report titled "Technical Report on the mineral resource and mineral reserve estimate for Casa Berardi Mine, Northwestern Quebec, Canada" effective date March 31, 2014 (the "Casa Berardi Technical Report"), and for the San Sebastian Mine, Mexico, are contained in a technical report prepared for Hecla titled "Technical Report for the San Sebastian Ag-Au Property, Durango, Mexico" effective date September 8k 2015 . Also included in these four technical reports is a description of the key assumptions, parameters and methods used to estimate mineral reserves and resources and a general discussion of the extent to which the estimates may be affected by any known environmental, permitting, legal, title, taxation, socio-political, marketing or other relevant factors. Copies of these technical reports are available under Hecla's and Aurizon's profiles on SEDAR at www.sedar.com. The Casa Berardi Technical Report was reviewed by Dr. McDonald on behalf of Hecla. To the best of Hecla's knowledge, information and belief, there is no new material scientific or technical information that would make the disclosure of the mineral resources and mineral reserves for Casa Berardi in this document inaccurate or misleading.

Cautionary Note Regarding Non-GAAP measures

Cash cost per ounce of silver and gold, net of by-product credits, EBITDA, adjusted EBITDA, all in sustaining capital ("AISC"), after by-product credits, and free cash flow represent non-U.S. Generally Accepted Accounting Principles (GAAP) measurements. A reconciliation of these non-GAAP measures to the most comparable GAAP measurements can be found in the Appendix.

Why Invest in Hecla?

Consistent strategy creates value

NYSE:HL

1. N.A. Silver & Gold Exposure

- Silver reserves 172.3 Moz
- Gold reserves 2 Moz
- Significant zinc and lead exposure

2. Strong 2016; Better margins in 2017

- Record $646 M Revenue
- Record 46.1 Moz AgEq[1] Production
- All 4 mines performing strongly

*Metal price assumptions: Au $1,150/oz, Ag $14.50/oz, Zn $0.75/lb, Pb $0.80lb, USD/CAD assumed at $0.75, USD/MXN at $0.06

3. Operating & Financial Leverage

- **Flexibility**: High grade/low cash costs
- **Improving credit metrics:** $500 M HY (6.875%, 2021)
- **Financial discipline**: Did not write off assets or dilute shareholders to pay down debt

4. Low Cost, High Return Growth

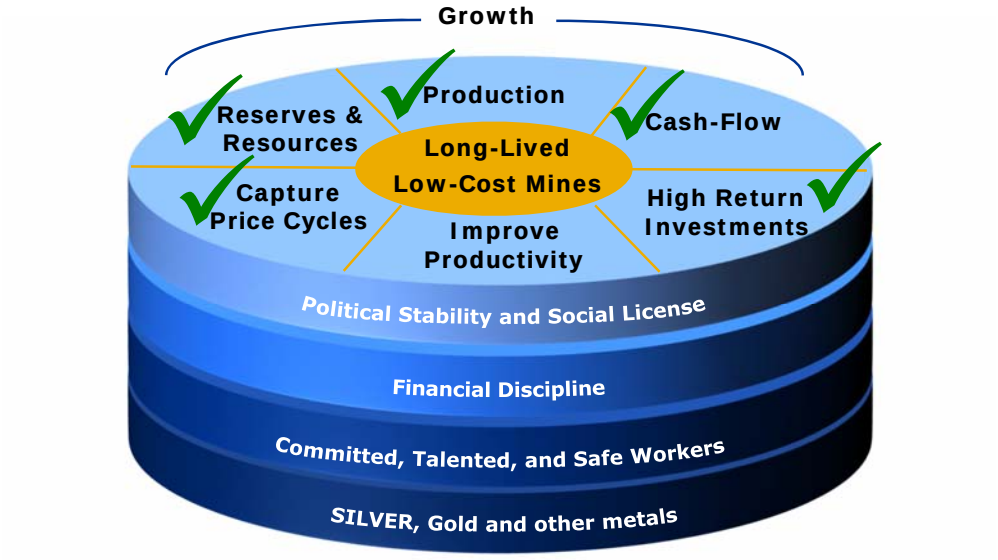
- **San Sebastian** (+1000% IRR)*
- **Casa Berardi** (90% IRR)** EMCP pits in production
- **Lucky Friday** #4 Shaft operational

*At current prices
**Report prepared for the Company's use by Mine Development Association dated 06/26/15

Strategy Created Per Share Value In 2016

2017 focus is on improving productivity through innovation

NYSE:HL

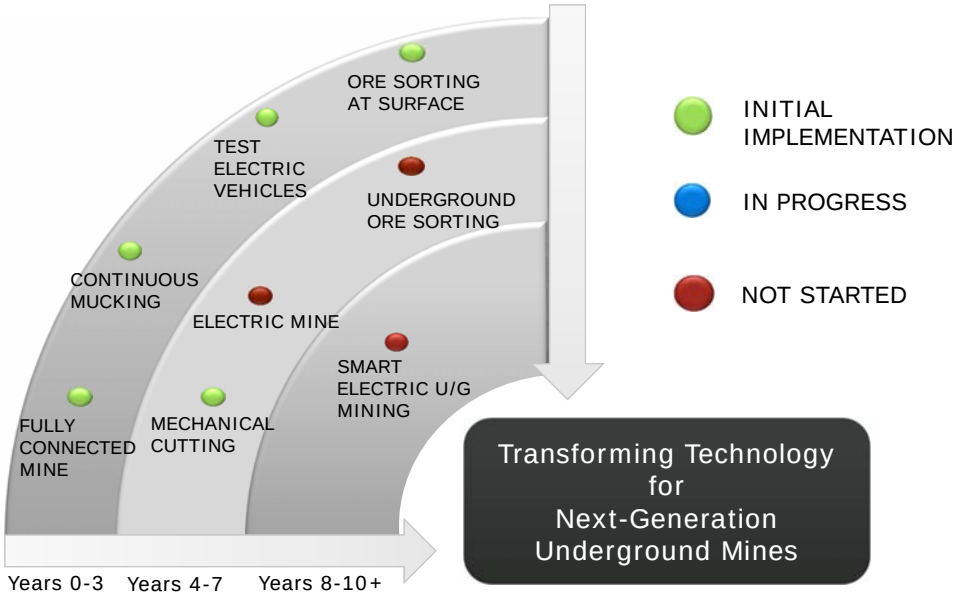


LONG TERM GOALS: Investment Grade & S&P 500 Listing

Hecla Advancing Innovation Quickly

Partial implementation has meaningful value creation for Hecla

NYSE:HL



Adapted from Canadian Mining Innovation Council (Jan 2017 is Year 0)

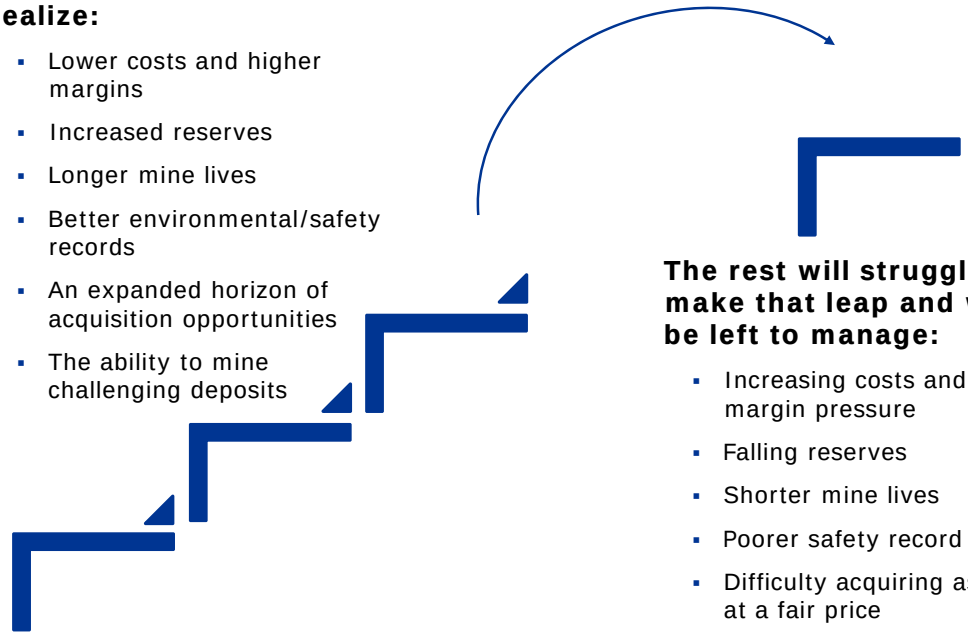
Innovation: A Key to Maximizing Value

Is the industry at a tipping point like the late '70's?

NYSE:HL

Those who innovate will realize:

- Lower costs and higher margins
- Increased reserves
- Longer mine lives
- Better environmental/safety records
- An expanded horizon of acquisition opportunities
- The ability to mine challenging deposits



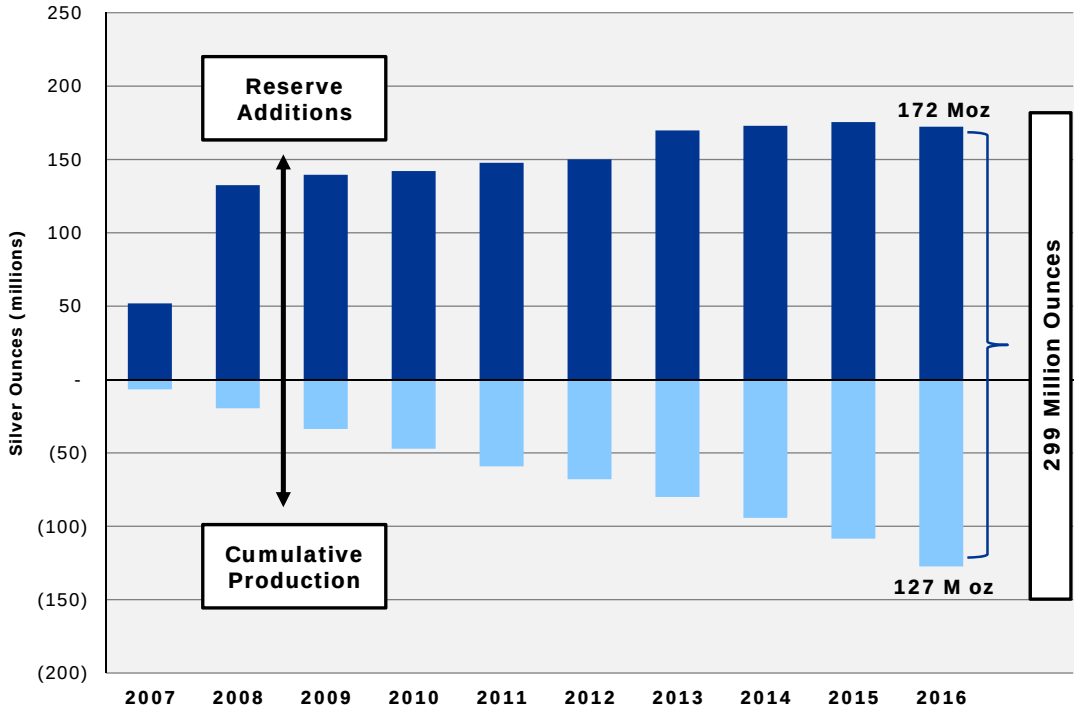
The rest will struggle to make that leap and will be left to manage:

- Increasing costs and margin pressure
- Falling reserves
- Shorter mine lives
- Poorer safety record
- Difficulty acquiring assets at a fair price
- Being left behind their peers or becoming acquisition targets

Added 299 Moz of Reserves Over Past 10 Years

Unchanged reserve despite replacing record production and lowest exploration budget since 2009

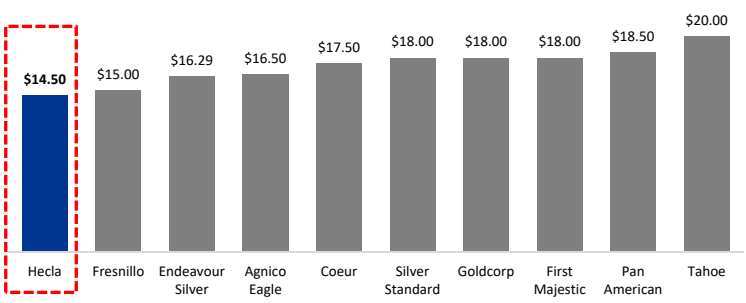
NYSE:HL



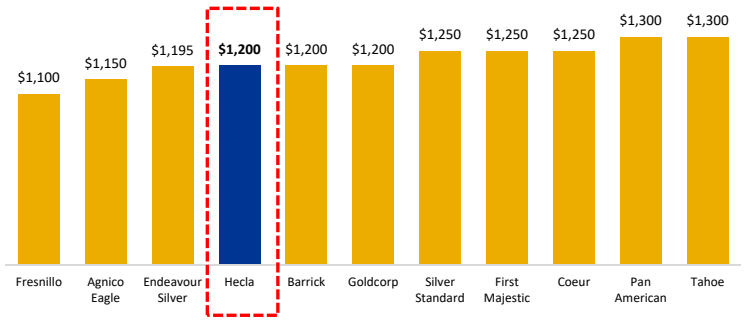
Gold & Silver 2016 Reserve Prices

Hecla's price assumption assures high margin ounces

NYSE:HL



Year	HL Reserve Prices
2012	$26.50
2013	$20.00
2014	$17.25
2015	$14.50
2016	$14.50



Year	HL Reserve Prices
2012	$1,400
2013	$1,300
2014	$1,225
2015	$1,100
2016	$1,200

M+I Resources	133 Moz silver @ 6.2 oz/t Ag

Union workers currently on strike.

Activities During the Strike

Upgrading infrastructure in preparation for resolution of strike

NYSE:HL

- Completed a necessary ventilation change on the new 6500 level
- Added a pumping connection between the #4 Shaft and Silver Shaft
- Additional development and limited production are planned, should the strike be prolonged

Testing of #4 Shaft rope

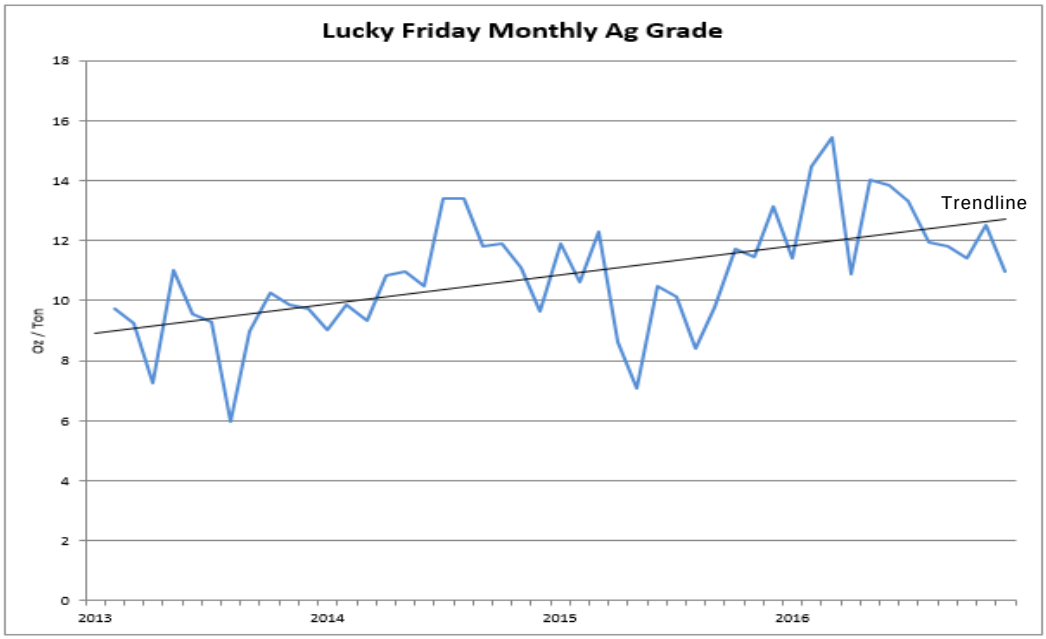
Pump inspection

Chiller maintenance

Lucky Friday Grade Improving With Depth

Trend expected to continue in the future

NYSE:HL

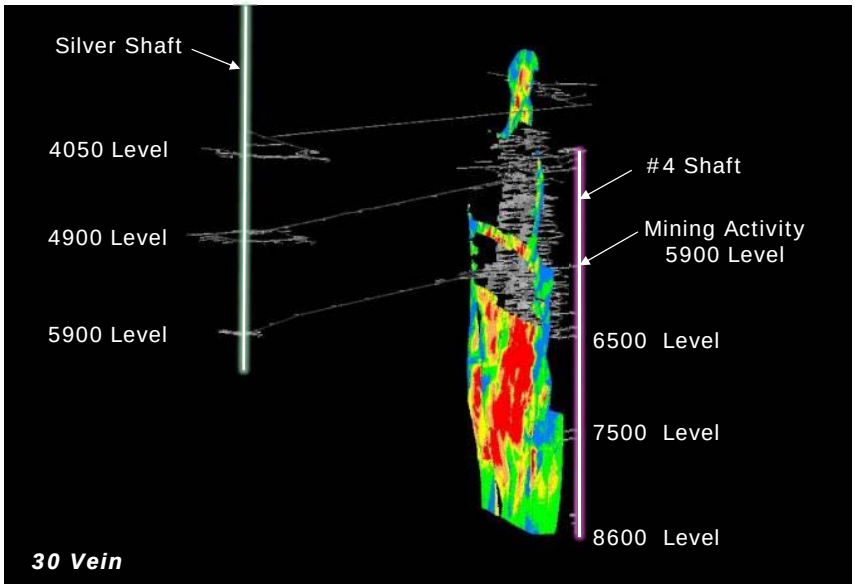


#4 Shaft

Increasing grade with depth

NYSE:HL

- Shaft is now operational
- Production growth expected from higher-grade ore at depth



ORE GRADE VALUES
*AgEq Grade (opt)

- > 24
- 18 - 24
- 12 - 18
- 6 - 12
- < 6

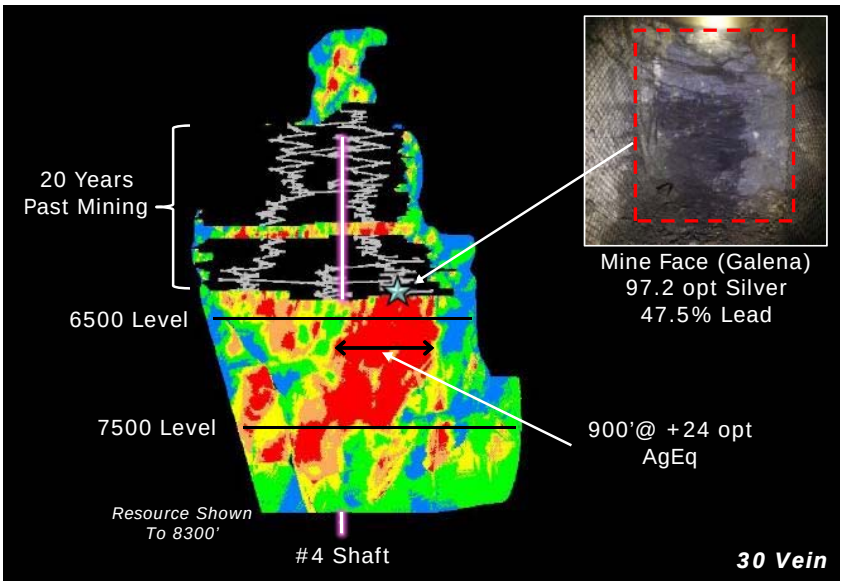
Dec. 31, 2015

*Ag Equivalent Values Based Upon: Resource Prices $20.00/oz Ag, $0.90/lb Pb, $0.90/lb Zn

#4 Shaft Gives Access to the High Grade Zone

Reserve grade 4 ounces higher than 2013, production grade increasing 0.5oz/yr

NYSE:HL



ORE GRADE VALUES
*AgEq Grade (opt)

- > 24
- 18 - 24
- 12 - 18
- 6 - 12
- < 6

Dec. 31, 2015

*Ag Equivalent Values Based Upon: Resource Prices $20.00/oz Ag, $0.90/lb Pb, $0.90/lb Zn

#4 Shaft Is Fully Operational

Waste being moved off 6500, ore later this year

NYSE:HL

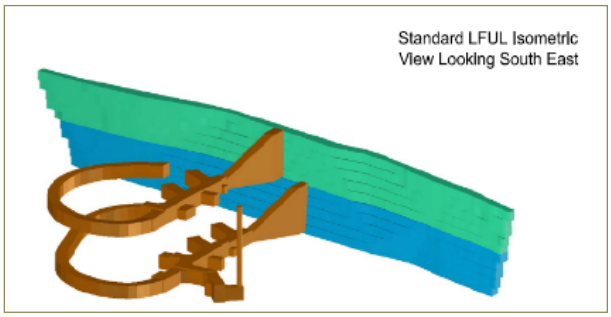
Lucky Friday - New Mining Technique

Increase cash flows, lower development

NYSE:HL

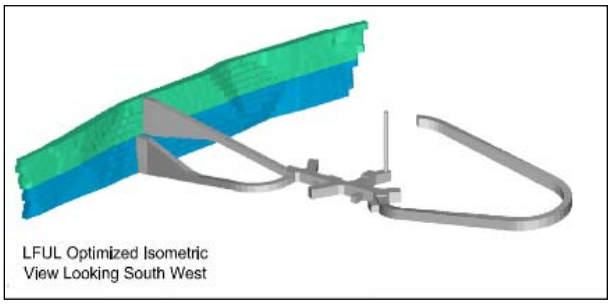
Standard LFUL:

- Current approach
- 5 cuts per ramp



Optimized LFUL:

- New approach
- 10 cuts per ramp
- Lower development expenditure
- Stopes turn around faster



Continuing Testing Battery Powered LHD

Technology could reduce ventilation needs vs diesel

NYSE:HL

Continuous Mechanical Cutting To Eliminate Drill/Blast

A 5-year investment that could revolutionize some mines

NYSE:HL

Could Improve Safety and Productivity

Atlas Copco Test Mine 2016

Casa Berardi

Making a good mine great

NYSE:HL

	2016	Q1 2016	Q1 2017	2017E

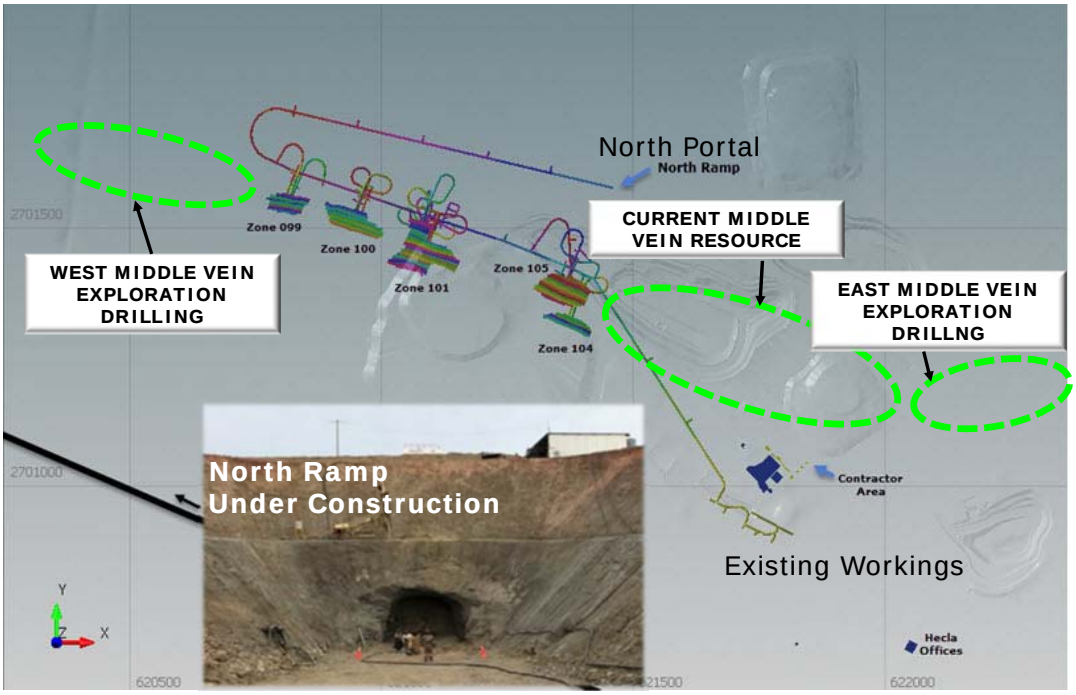
Access development is underway

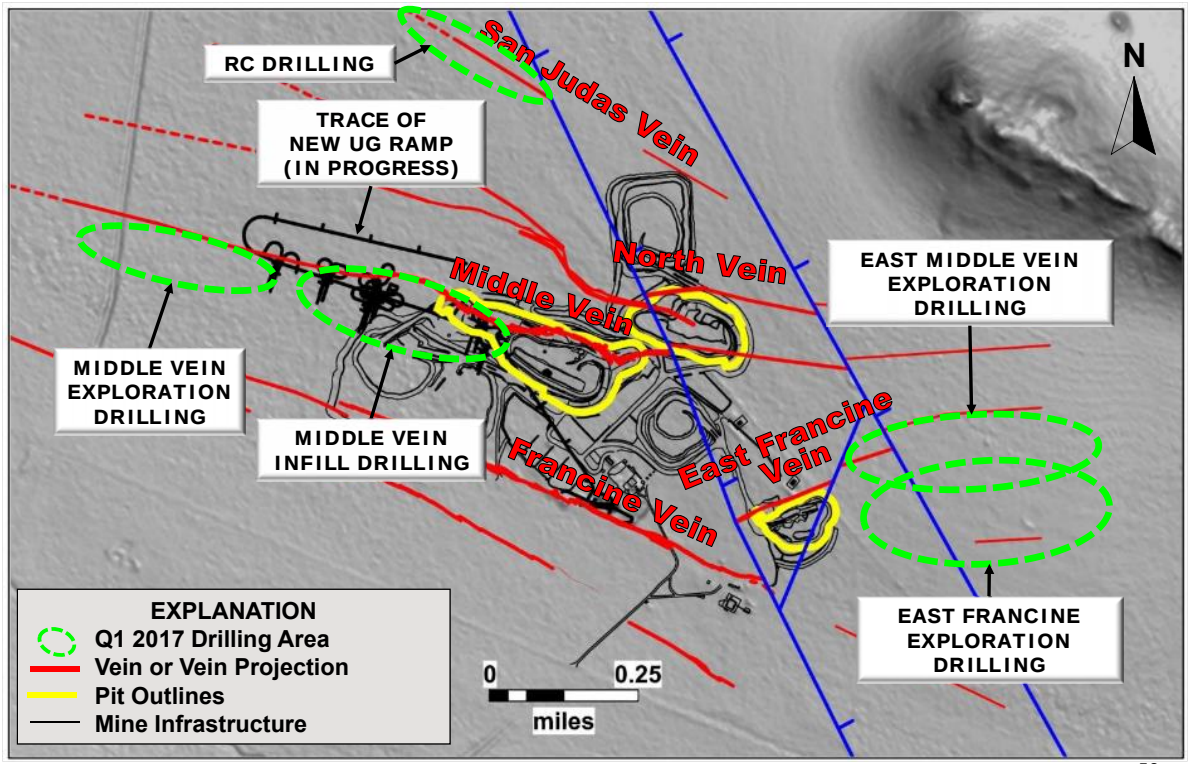
NYSE:HL



San Sebastian Plan View:

Current open pits, development and exploration advances

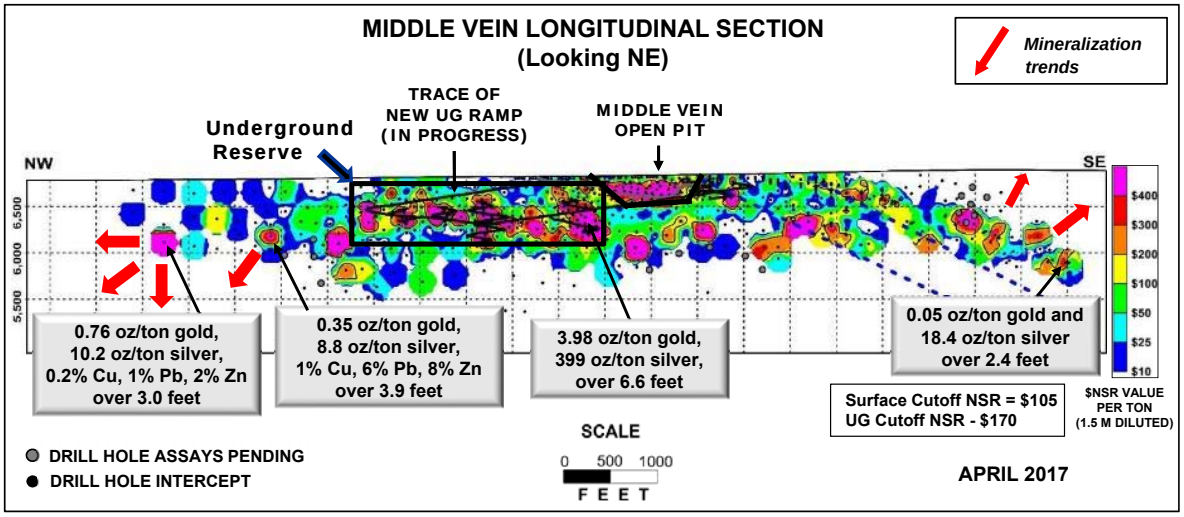
NYSE:HL



Middle Vein 1.5 Miles of Continuous Mineralization

Underground growing, deeper mineralization similar to Hugh Zone

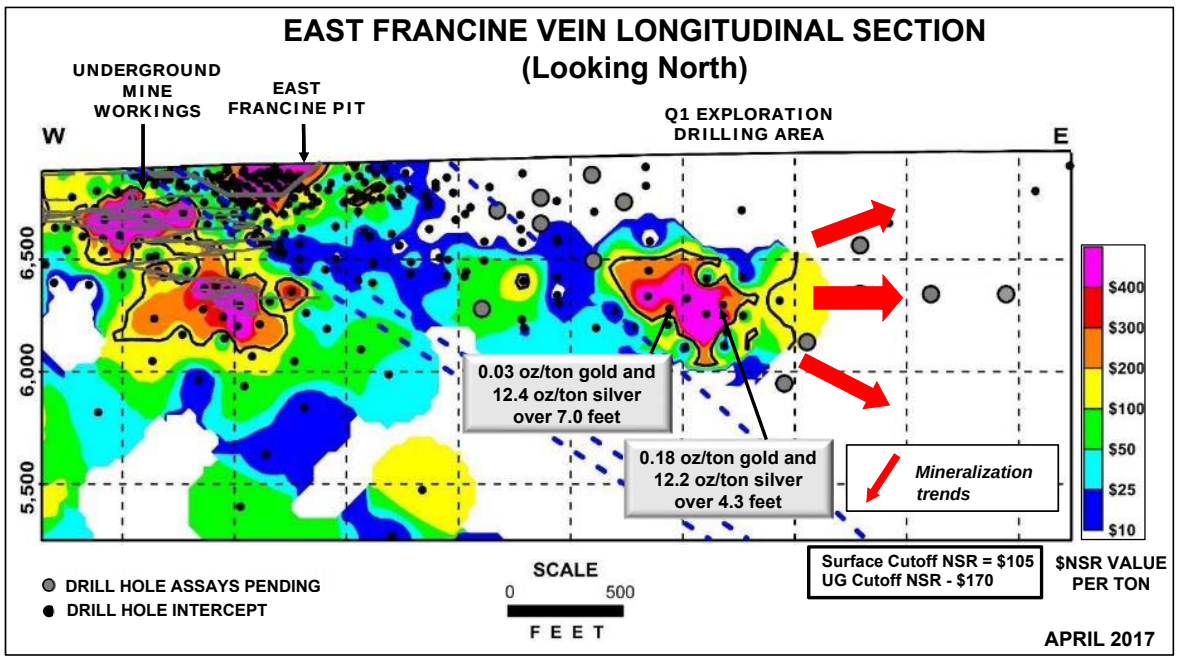
NYSE:HL



East Francine

Expanding resources to the East

NYSE:HL

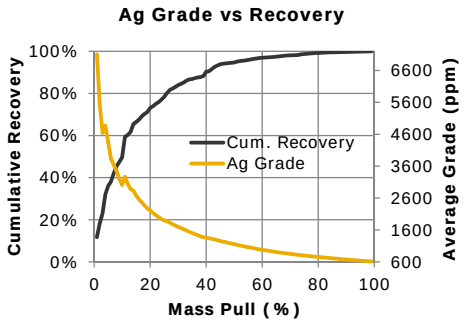


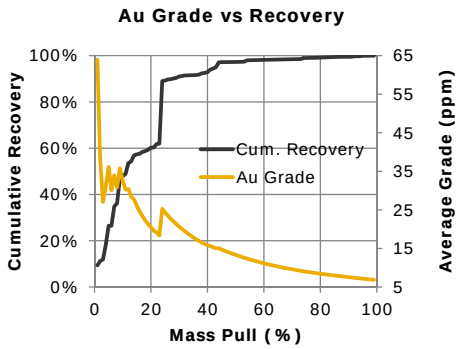
How Else Does San Sebastian Become Sustainable?

Ore sorting is a potential way of upgrading the ore

NYSE:HL

- Initial results indicate a reduction of mass by 60% while maintaining 90% of the silver and 93% of the gold values
- Approximately 10% of the ore is minus 1 inch and will not be sorted
- Could make 40% of the current resource economic





New Exploration Technology

Raman Spectroscopy – quicker, cheaper, and sufficient accuracy

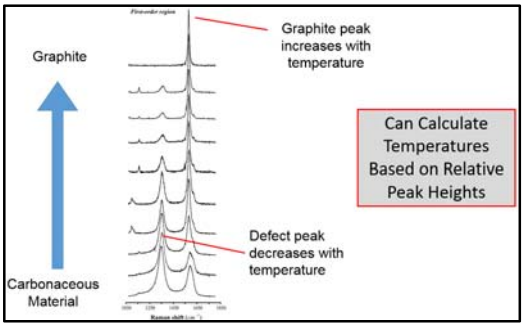
NYSE:HL

Advantages

- Quick to analyze and interpret (Days)
- Vein stratigraphy not required
- Less expensive

Disadvantages

- Less precise than Fluid Inclusions
- Measuring wall rock (indirect measurement of vein fluids)



Rock Creek & Montanore

Final stages of permitting, expecting to advance in 2018

NYSE:HL

	Rock Creek	Montanore
Potential Mine Life	20-30 years each	
Hecla stock acquisition cost	$19 M	$54 M
Big potential	148.1 Moz Ag / 1.3 Blbs Cu	183.4 Moz Ag / 1.5 Blbs Cu
Advanced permitting	SEIS	Final EIS, RODs**
Well located:	50 miles from Lucky Friday	
Large land position:	Good exploration potential	

** Record of Decision

Rock Creek & Montanore Silver Resources

Larger than Hecla's silver reserves

NYSE:HL

Total Hecla	Rock Creek	Montanore
(proven & probable)	(inferred resource)	(inferred resource)
172.3 million oz. Silver	148.1 million oz. Silver	183.4 million oz. Silver
	1.3 billion lbs. Copper	1.5 billion lbs. Copper

Interior Secretary Has Unique Experience

Former Montana Congressman, geologist, knows the project

NYSE:HL

Ryan Zinke

- US Representative for Montana since 2015 (former state Senator)
- Geologist from Whitefish, Montana
- Has visited our sites
- Strong supporter of economic development in NW Montana
- Oversees US Fish and Wildlife Service; key agency involved in permitting these projects
- Oversees Bureau of Land Management; controls the US mineral estates

Endnotes

NYSE:HL

1. Silver equivalent is calculated using the average market prices for the time period noted.
2. This presentation refers to a non-GAAP measure of adjusted earnings before interest, taxes, depreciation and amortization ("Adjusted EBITDA"), which is a measure of our operating performance. Adjusted EBITDA is calculated as net income (loss) before the following items: interest expense, income tax provision, depreciation, depletion, and amortization expense, exploration expense, pre-development expense, acquisition costs, interest and other income (expense), foreign exchange gains and losses, gains and losses on derivative contracts, unrealized gains on investments, provisions for environmental matters, stock-based compensation, and provisional price gains and losses. Management believes that, when presented in conjunction with comparable GAAP measures, adjusted EBITDA is useful to investors in evaluating our operating performance.
3. Net debt to adjusted EBITDA is a non-GAAP measurement, a reconciliation of adjusted EBITDA and net debt to the closest GAAP measurements of net income (loss) and debt can be found at the end of the presentation. It is an important measure for management to measure relative indebtedness and the ability to service the debt relative to its peers. It is calculated as total debt outstanding less total cash on hand divided by adjusted EBITDA on a last 12-month basis.
4. Cash cost, after by-product credits, per silver and gold ounce represents a non-GAAP measurement, a reconciliation of which to cost of sales and other direct production costs and depreciation, depletion and amortization (sometimes referred to as "cost of sales" in this release), can be found at the end of the release. It is an important operating statistic that management utilizes to measure each mine's operating performance. It also allows the benchmarking of performance of each mines versus those of our competitors. As a primary silver mining company, management also uses the statistic on an aggregate basis - aggregating the Greens Creek, Lucky Friday and San Sebastian mines - to compare performance with that of other primary silver mining companies. With regard to Casa Berardi, management uses cash cost, after by- product credits, per gold ounce to compare its performance with other gold mines. Similarly, the statistic is useful in identifying acquisition and investment opportunities as it provides a common tool for measuring the financial performance of other mines with varying geologic, metallurgical and operating characteristics. In addition, the Company may use it when formulating performance goals and targets under its incentive program.
5. Free Cash Flow is a non-GAAP measure calculated as Operating Cash Flow (GAAP) less Capex (GAAP). Cash flow conversion calculated as Free Cash Flow from mines divided by Operating Cash Flow.
6. All in sustaining cost (AISC), after byproduct credits, is a non-GAAP measurement, a reconciliation of which to cost of sales and other direct production costs and depreciation, depletion and amortization, the closest GAAP measurement, can be found in the appendix. AISC, after by-product credits, includes cost of sales and other direct production costs, expenses for reclamation and exploration, and sustaining capital costs at the mines sites. AISC, after by-product credits for our consolidated silver properties also includes corporate costs for all general and administrative expenses, exploration and sustaining capital which support the operating properties. AISC, after by-product credits, is calculated net of depreciation, depletion, and amortization and by-product credits. 2017E refers to Hecla's estimates for 2017. Current GAAP measures used in the mining industry, such as cost of goods sold, do not capture all the expenditures incurred to discover, develop and sustain silver and gold production. Management believes that all in sustaining costs is a non-GAAP measure that provides additional information to management, investors and analysts to help in the understanding of the economics of our operations and performance compared to other producers and in the investor's visibility by better defining the total costs associated with production. Similarly, the statistic is useful in identifying acquisition and investment opportunities as it provides a common tool for measuring the financial performance of other mines with varying geologic, metallurgical and operating characteristics. In addition, the Company may use it when formulating performance goals and targets under its incentive program
7. 2017E refers to Hecla's estimates for 2017.
8. Expectations for 2017 includes silver, gold, lead and zinc production from Lucky Friday, Greens Creek, San Sebastian and Casa Berardi converted using Au $1,225/oz, Ag $17.25/oz, Zn $1.30/lb, Pb $1.05/lb.

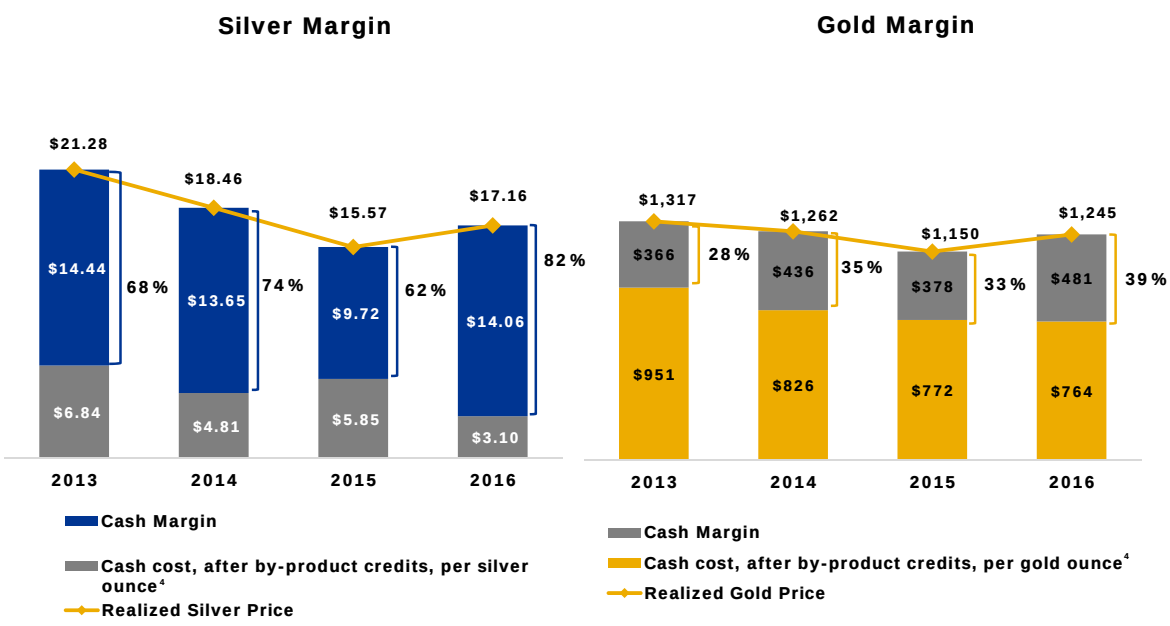
Items of Note

NYSE:HL

- Expect to begin depreciating the #4 Shaft in Q2
  - Total depreciation for 2017 estimated to be $143 million
- G&A increased in 2016 due to accrual for the Annual Incentive Plan and Long Term Incentive Plan based on strong performance against long-term goals and against peers
- Have begun reporting AISC on a produced (contained) basis
  - We believe it is closest to our previous disclosure and most meaningful for a concentrate producer such as Hecla

Silver and Gold Margin Expansion

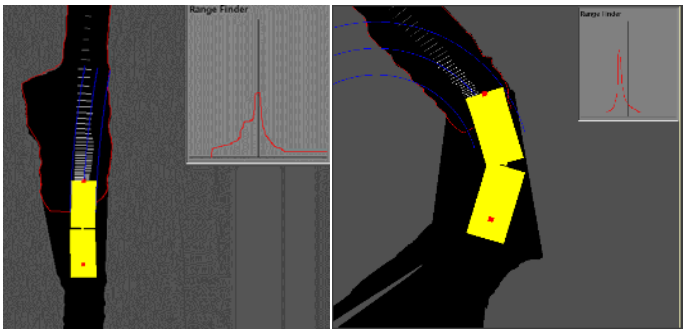
NYSE:HL



RCT Truck Guidance

NYSE:HL

- Install Progress
  - Fully installed on truck 4213
  - Commissioning of system complete
  - Training of operators to start soon
  - Able to run in mainline and ramps
- Operator assist system
  - Not Autonomous
  - System controls throttle, brakes, and steering
  - Utilizes forward and reverse laser scanners to profile tunnel



Increasing Share of Modern Demand

NYSE:HL

Modern demand increased from 260 Moz in 1992 to 544 Moz in 2014, an increase of 109%, and an annualized increase of 4.0%

(b) Mineral resources are based on $1350 gold, $21 silver, $0.95 lead, $1.10 zinc and $3.00 copper, unless otherwise stated.

(2) Measured and indicated resources from Gold Hunter and Lucky Friday vein systems are diluted and factored for expected mining recovery.

(3) Measured, indicated and inferred resources are based on $1,350 gold and a US$/CAN$ exchange rate of 1:1.4 Underground resources are reported at a minimum mining width of 6.6 to 9.8 feet (2 m to 3 m)
Open pit mineral resources of the Principal Mine were estimated in February 2011 by BBA Inc. based on $950 gold and a US$/CAN$ exchange rate of 1:1
Technical Report on the Pre-Feasibility Study for the Casa Berardi Principal Zone Open-Pit Project, La Sarre, Quebec, February 2011
Prepared by: Patrice Live, Eng. - BBA Inc.; Amanda Fitch, Jr. Eng. - BBA Inc.; Andre Allaire, Eng., M. Eng., Ph.D. - BBA
Open pit mineral resources of the 160 Zone were estimated by InnovExplo Inc., effective date 24 August, 2011, based on $1,250 gold and a US$/CAN$ exchange rate of 1:1, Resources diluted to 12%
Preliminary Economic Assessment on the Casa Berardi Mine - Zone 160, May 4, 2012
Prepared by: Nathalie Gauthier, Eng., P.Eng., - InnovExplo; Gilles Carrier, Eng., Aurizon Mines Ltd.

(4) Indicated resources reported at a minimum mining width of 6.6 feet (2 m) for Hugh Zone and 4.9 feet (1.5 m) for Andrea Vein, Middle Vein, and North Vein. East Francine resources reported at actual vein width.
San Sebastian lead, zinc and copper grades are for 499,200 tons of indicated resource within the Hugh Zone only.

(5) Measured, indicated and inferred resources were estimated in by Goldminds Geoservices Inc. with effective date 12-July-2013, and are based on $1,300 gold and a US$/CAN$ exchange rate of 1:1.
The resources are in-situ without dilution and material loss.
NI43-101 Technical Report, Mineral Resource Update, Heva-Hosco Gold Projects, Rouyn-Noranda, Quebec, Hecla Quebec, December 2013
Prepared by: Claude Duplessis, Eng. Project Manager - GoldMinds Geoservices Inc.; Maxime Dupéré, P.Geo - SGS Canada Inc. (Geostat)

(6) Indicated resources reported at a minimum mining width of 6.0 feet for Bulldog; resources based on $26.5 Ag, $0.85 Pb, and $0.85 Zn

(7) Indicated resources reported at a minimum mining width of 4.3 feet.

(8) Inferred resources from Gold Hunter and Lucky Friday vein systems are diluted and factored for expected mining recovery.

(9) Inferred resources reported at a minimum mining width of 6.6 feet (2 m) for Hugh Zone and 4.9 feet (1.5 m) for Andrea Vein, Middle Vein, and North Vein. East Francine resources reported at actual vein width.
San Sebastian lead, zinc, and copper grades are for 1,311,300 tons of inferred resource within the Hugh Zone only.

(10) Inferred resources reported at a minimum mining width of 6.0 feet for Bulldog, 5.0 feet for Equity & North Amethyst veins; resources based on $1400 Au, $26.5 Ag, $0.85 Pb, and $0.85 Zn.

(11) Inferred resources reported at a minimum mining width of 4.3 feet.

(12) Inferred resource reported at a minimum mining width of 5.0 feet; resources based on $1400 Au, $26.5 Ag.

(13) Inferred resource reported at a minimum thickness of 15 feet; Rock Creek also contains 655,070 tons of copper at 0.7% within stated inferred resource tonnage.
Inferred resources at Rock Creek adjusted given mining restrictions as defined by U.S. Forest Service - Kootenai National Forest in the June 2003 'Record of Decision, Rock Creek Project'.

(14) Inferred resource reported at a minimum thickness of 15 feet; Montanore also contains 759,420 tons of copper at 0.7% within stated inferred resource tonnage.
Inferred resources at Montanore adjusted given mining restrictions as defined by U.S. Forest Service, Kootenai National Forest, Montana DEQ in the December 2015 'Joint Final EIS, Montanore Project' and the February 2016 U.S Forest Service - Kootenai National Forest 'Record of Decision, Montanore Project'.

By-product credits per silver ounce	$ (14.88)	$ (17.50)	$ (20.21)	$ (21.72)
Cash cost, after by-product credits, per silver ounce	$ 3.10	$ 5.85	$ 4.81	$ 6.84

1) Commercial production began at the San Sebastian unit in the fourth quarter of 2015.
2) Includes all direct and indirect operating cash costs related to the physical activities of producing metals, including mining, processing, and other plant costs, third-party refining and marketing expense, on-site general and administrative costs, royalties and mining production taxes, net of by-product revenues earned from all metals other than the primary metal produced at each unit.

Cash Cost GAAP Reconciliation

Casa Berardi

NYSE:HL

Reconciliation of Cost of Sales and Other Direct Production Costs and Depreciation, Depletion and Amortization, the most comparable GAAP measurement to Cash Costs, After By-Product Credits, per Gold Ounce, for Casa Berardi[1]
(dollars in thousands, except per ounce)

	2016	2015	2014	2013
Cost of sales and other direct production costs and depreciation, depletion and amortization (GAAP)	$ 155,711	$ 144,558	$ 148,043	$ 73,855
Depreciation, depletion and amortization	(47,312)	(43,674)	(38,198)	(18,030)
Treatment costs	1,264	670	564	268
Change in product inventory	2,890	(1,970)	(3,151)	3,766
Reclamation and other costs	(459)	(455)	(820)	(142)
Cash cost, before by-product credits [2]	112,094	99,129	106,438	59,717
By-products credits	(572)	(457)	(464)	(262)
Cash cost, after by-product credits	$ 111,522	$ 98,672	$ 105,974	$ 59,455
Divided by gold ounces produced	145,975	127,891	128,244	62,532
Cash cost, before by-product credits, per gold ounce	$ 767.90	$ 775.11	$ 829.97	$ 954.98
By-products credits per gold ounce	$ (3.92)	$ (3.57)	$ (3.62)	$ (4.19)
Cash cost, after by-product credits, per gold ounce	$ 763.98	$ 771.54	$ 826.35	$ 950.79

1) On June 1, 2013, we completed the acquisition of Aurizon, which gave us 100% ownership of the Casa Berardi mine in Quebec, Canada. The information presented reflects our ownership of Casa Berardi commencing as of that date. The primary metal produced at Casa Berardi is gold, with a by-product credit for the value of silver production.
2) Includes all direct and indirect operating cash costs related to the physical activities of producing metals, including mining, processing, and other plant costs, third-party refining and marketing expense, on-site general and administrative costs, royalties and mining production taxes, net of by-product revenues earned from all metals other than the primary metal produced at each unit.
