Non-GAAP Financial Measures

Organic sales growth, or organic growth, is defined as the difference between total current and prior year sales less the impact of companies acquired and divested in the past twelve months and any foreign currency impacts divided by prior year sales. Operating profit is defined as sales less cost of sales and selling, general and administrative expenses. Operating margin is operating profit as a percentage of sales. Operating profit and operating margin are shown both inclusive and exclusive of acquisition-related and other charges. Management uses operating profit and operating margin as key measures to assess the performance of the Company as a whole, as well as the related measures at the segment level. Diluted EPS, excluding charges, or adjusted EPS, is diluted GAAP EPS excluding the impacts of acquisition-related and other charges. Free cash flow is defined as cash flow from operations less capital and software expenditures. Management considers free cash flow an important indicator of its liquidity, as well as its ability to fund future growth and to provide a return to the shareowners, and is useful information for investors. Free cash flow does not include deductions for mandatory debt service, other borrowing activity, discretionary dividends on the Company’s common and preferred stock and business acquisitions, among other items. Free cash flow conversion is defined as free cash flow divided by net income. The Non-GAAP statement of operations and business segment information is reconciled to GAAP on pages 13 and 14 of the press release. The Company considers the use of the Non-GAAP financial measures above relevant to aid analysis and understanding of the Company’s results, business trends and outlook measures aside from the material impact of acquisition-related and other charges and ensures appropriate comparability to operating results of prior periods.
