

10 YEARS OF LI-METAL BATTERIES

Technology, Supply Chain, and New Business Model

DISCLAIMER

INDUSTRY AND MARKET DATA

Although all information and opinions expressed in this Presentation, including market data and other statistical information, were obtained from sources believed to be reliable and are included in good faith, SES has not independently verified the information and makes no representation or warranty, express or implied, as to its accuracy or completeness. Some data is also based on the good faith estimates of SES, which are derived from reviews of internal sources as well as the independent sources described above.

TRADEMARKS AND TRADE NAMES

SES owns or has rights to various trademarks, service marks and trade names that it uses in connection with the operation of its businesses. This Presentation also contains trademarks, service marks and trade names of third parties, which are the property of their respective owners. The use or display of third parties' trademarks, service marks, trade names or products in this Presentation is not intended to, and does not imply, a relationship with SES, or an endorsement or sponsorship by or of SES. Solely for convenience, the trademarks, service marks and trade names referred to in this Presentation may appear with the @, TM or SM symbols, but such references are not intended to indicate, in any way, that SES will not assert, to the fullest extent under applicable law, its rights or the right of the applicable licensor to these trademarks, service marks and trade names.

FORWARD-LOOKING STATEMENTS

All statements other than statements of historical facts contained in this presentation are “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995. These forward-looking statements include, without limitation, statements relating to expectations for future financial performance, business strategies or expectations for our business. These statements are based on the beliefs and assumptions of the management of SES. Although SES believes that its plans, intentions and expectations reflected in or suggested by these forward-looking statements are reasonable, it cannot assure you that it will achieve or realize these plans, intentions or expectations. These statements constitute projections, forecasts and forward-looking statements, and are not guarantees of performance. Such statements can be identified by the fact that they do not relate strictly to historical or current facts. When used in this presentation, words such as “anticipate”, “believe”, “can”, “continue”, “could”, “estimate”, “expect”, “forecast”, “intend”, “may”, “might”, “plan”, “possible”, “potential”, “predict”, “project”, “seek”, “should”, “strive”, “target”, “will”, “would” and similar expressions may identify forward-looking statements, but the absence of these words does not mean that a statement is not forward-looking.

You should not place undue reliance on these forward-looking statements. Should one or more of a number of known and unknown risks and uncertainties materialize, or should any of our assumptions prove incorrect, our actual results or performance may be materially different from those expressed or implied by these forward-looking statements. Some factors that could cause actual results to differ include, but are not limited to the following risks: changes in domestic and foreign business, market, financial, political and legal conditions, including but not limited to the ongoing conflict between Russia and Ukraine; risks relating to the uncertainty of the projected financial information with respect to SES; risks related to the development and commercialization of SES's battery technology and the timing and achievement of expected business milestones; the effects of competition on SES's business; the ability of SES to issue equity or equity-linked securities or obtain debt financing in the future; the ability of SES to integrate its products into electric vehicles (“EVs”); the risk that delays in the pre-manufacturing development of SES's battery cells could adversely affect SES's business and prospects; potential supply chain difficulties; risks resulting from SES's joint development agreements and other strategic alliances, if such alliances are unsuccessful; the quickly evolving battery market; SES's ability to accurately estimate future supply and demand for its batteries; SES's ability to develop new products on an ongoing basis in a timely manner; product liability and other potential litigation, regulation and legal compliance; SES's ability to effectively manage its growth; SES's ability to attract, train and retain highly skilled employees and key personnel; the willingness of vehicle operators and consumers to adopt EVs; developments in alternative technology or other fossil fuel alternatives; SES's ability to meet certain motor vehicle standards; a potential shortage of metals required for manufacturing batteries; risks related to SES's intellectual property; the uncertainty in global economic conditions and risks relating to health epidemics, including the COVID-19 pandemic and any operational interruptions; risks related to SES's business operations outside the United States, including in China; SES has identified material weaknesses in its internal control over financial reporting and may identify material weaknesses in the future or otherwise fail to maintain an effective system of internal controls; compliance with certain health and safety laws; changes in U.S. and foreign tax laws; and the other risks described in “Part I, Item 1A. Risk Factors” in our annual report on Form 10-K for the fiscal year ended December 31, 2021 filed with the Securities and Exchange Commission (“SEC”) on March 31, 2022 and other documents filed from time to time with the SEC. There may be additional risks that SES presently knows and/or believes are immaterial that could also cause actual results to differ from those contained in the forward-looking statements. In addition, forward-looking statements reflect SES's expectations, plans or forecasts of future events and views only as of the date of this presentation. SES anticipates that subsequent events and developments will cause its assessments to change. However, while SES may elect to update these forward-looking statements at some point in the future, SES specifically disclaims any obligation to do so. These forward-looking statements should not be relied upon as representing SES's assessments as of any date subsequent to the date of this presentation.

USE OF PROJECTIONS

This Presentation contains projected financial information with respect to SES. Such projected financial information constitutes forward-looking information, is for illustrative purposes only and should not be relied upon as necessarily being indicative of future results. The assumptions and estimates underlying such financial forecast information are inherently uncertain and are subject to a wide variety of significant technical, business, economic, competitive and other risks and uncertainties that could cause actual results to differ materially from those contained in the prospective financial information. See the “Forward-Looking Statements” paragraph above for a description of many of such risks and uncertainties. Actual results may differ materially from the results contemplated by the financial forecast information contained in this Presentation, and the inclusion of such information in this Presentation should not be regarded as a representation by any person that the results reflected in such forecasts will be achieved. SES's independent auditors have not audited, reviewed, compiled or performed any procedures with respect to the projections for the purpose of their inclusion in this Presentation, and accordingly, have not expressed an opinion or provided any other form of assurance with respect thereto for the purpose of this Presentation.

SES INVESTMENT HIGHLIGHTS

Li-Metal Batteries with Leading Energy Density and Comprehensive Supply Chain Partners

Manufacturing Approach Takes Advantage of Cost-effective Conventional Industry Processes

A-Sample Joint Development Agreements in Place with General Motors, Hyundai, and Honda

Collecting Data and Building AI Algorithms to Monitor Battery Health and Enhance Safety -- BaaS Opportunities

Experienced Management Team with Decades of Battery Development

Funded to Commercialization with \$395MM of Cash on Balance Sheet as of 9/30/22

HISTORY OF BATTERIES

**Winning Technologies
Are Significantly
Smaller and Lighter
Than Their Precedents.**

**The future is not solid.
It will be Li-Metal.**

SES LI-METAL BATTERIES ARE

DENSER

Projected 400 Wh/kg and 1,000 Wh/L, leading to significantly longer driving range

CHEAPER

Designed to be manufacturable at scale using existing infrastructure and processes

LIGHTER

Ultra-thin Li-Metal anode reduces battery weight and production cost

SAFER

Proprietary electrolyte and AI algorithm greatly enhance safety

FASTER

Capable of 80% charge in less than 15 minutes

SMARTER

AI-powered algorithm optimizes performance

Superior Technology, Safety and Manufacturability

BACKED BY STRATEGIC INVESTORS & OPERATORS

HYUNDAI
MOTOR GROUP

HONDA

GEELY

TCL TIANQI LITHIUM

IVANHOE

OUR TEAM

DR. QICHAO HU
Founder, Chairman & CEO

- Forbes 30 Under 30
- MIT Technology Review Innovators Under 35
- PhD in Applied Physics from Harvard and BS in Physics from MIT

ROHIT MAKHARIA
President
Chief Operating Officer

- 19 years with General Motors
- 12 years in fuel cell and battery EV. Led battery cell development for Chevy Bolt
- 7 years at GM Ventures. Previously, Board Director of SES

JING NEALIS
Chief Financial Officer

- 18 years of finance experience, including at public companies
- Previously worked at View, SunPower, Shunfeng, Suntech Power and Deloitte

DR. HONG GAN
Chief Science Officer

- 25 years of battery R&D experience
- Key contribution in silicon-based Li-ion and Li-S technologies
- PhD in Chemistry from Uni. of Chicago and PostDoc from Uni. of Rochester

YONGKYU SON
Chief Technology Officer

- 20 years of cell and process development experience
- Responsible for Apple's LV battery, SKI's PHEV 20Ah and SDI's first 18650 cell launch

HANS KIM
Head Of Korea

- 30 years of experience in cross border corporate finance and capital markets in Seoul, Asia, US and UK
- Advised Korean blue-chip companies such as Samsung Electronics, LG, Hyundai, SK, Posco and Korean sovereign institutions

DR. WINSTON WANG
Head of China

- Managed battery R&D at DJI. Responsible for DJI's key drone smart battery and power systems launch.
- PhD in Mechanical Engineering from the University of Hong Kong.

KYLE PILKINGTON
Chief Legal Officer

- 16 years of international legal experience, including in capital markets, securities law, corporate governance and M&A
- Previously worked at International Game Technology, Sullivan & Cromwell, Gibson Dunn and Baker McKenzie

ERIC GOLDSTEIN
VP of Investor Relations

- Over 25 years of Wall Street experience analyzing the automotive industry as a sell-side research analyst and a professional investor while working at Bear Stearns, Salomon Brothers, and Shay Capital.
- Also served as VP of Investor Relations for auto supplier Magna International.

RICHARD CHANG
VP of Business Development

- Previously held senior sales positions at prominent battery technology companies
- At CATL, held account management responsibility for BMW and VW

OUR FOOTPRINT

Boston HQ + Shanghai Giga + Korea Positions SES to Realize Scale in Multiple High-Growth Markets

BOSTON HQ

- Chemistry, materials, algorithm R&D
- Finance
- Headquarters

SHANGHAI GIGA

- Manufacturing process development
- Cell, module, BMS R&D
- Pilot plant
- OEM JDA collaboration

SINGAPORE

- Legal

SOUTH KOREA

- Supply chain
- Customer relations

SES LI-METAL BATTERY TECHNOLOGY

Wide Format Li-Metal Anode

- Ultra-thin Li-Metal anode manufactured through a proprietary process

Composite Anode Coating

- Mechanical barrier to enhance safety

Polymer-Based Separator

- Highly manufacturable state-of-the-art separator

Solvent-in-Salt Liquid Electrolyte Formula

- Low-volatility and self-extinguishing

High-Capacity Cathode

- Highly manufacturable state-of-the-art cathode technology

Combined in a Proprietary Cell Design for Optimized Performance and Safety

INNOVATIVE AND PROPRIETARY ELECTROLYTE COMPOSITION

SES electrolyte uses a high concentration solvent-in-salt approach. A conventional liquid electrolyte is low concentration, where the salt is coordinated by solvent and there are free solvent molecules that are volatile and flammable. In SES's high concentration electrolyte, the solvent is coordinated by the salt and there are no free solvent molecules, and the solvent molecules are non-volatile and non-flammable.

Electrolyte Composition:

Salt: The main salt is LiFSI, with a proprietary purity profile and trade secret purification process

Solvent: Proprietary and patented solvent that SES designed and synthesized, not commercially available, and non-volatile and non-flammable

Additives: Proprietary/trade secret

Low Concentration
Most solvent molecules are
uncoordinated

High Concentration
Solvent almost fully coordinated
No free solvent

PLATFORMS FOR BATTERY DEVELOPMENT - AVATAR

AVATAR – Mine-to-Men AI Software

- From mine to manufacturing to in-vehicle use and recycling
- Integral to monitoring battery health & end of life use
- Data will support new Battery as a Service (BaaS) models

The Future of Li-Metal/Li-ion Supply Chain

MILESTONES & 2022 FINANCIAL GUIDANCE

- **Targeted Milestones over the next 12-months**
 - Deliver and optimize A-samples for our 3 JDA Partners
 - Begin to transition from A-samples to B-samples
 - Continue to establish supply chains for key materials
- **2022 Financial Guidance**
 - Capital expenditures in the range of \$20 - \$25 million
 - Cash used in operations in the range of \$55 - \$60 million
 - Total cash used in the range of \$75 - \$85 million
