Update: U.S. Insurance Industry Begins to See Surplus Recovery, Boosted by First Half Capital Gains and Signs of U.S. Property and Casualty Firms Inching Towards Stabilization

2024-08-28

Verisk & APCIA report that capital gains helped fuel surplus recovery and offset industry losses, amidst inflation impacts and natural catastrophe events

JERSEY CITY, N.J., Aug. 28, 2024 (GLOBE NEWSWIRE) -- **Verisk** (Nasdaq: VRSK), a leading global data analytics and technology provider, and **The American Property Casualty Insurance Association** (APCIA), the primary national trade association for home, auto and business insurers, today reported that half-year 2024 gains for the insurance industry are estimated to be \$95 billion. Adjusting for over \$50 billion in capital gains realized by one insurer, first half 2024 gains are estimated to be approximately \$45 billion. According to key financial indicators for private U.S. property/casualty insurers, while the first half of 2024 experienced similar losses for insurers as those seen in 2023, the losses are no longer reducing surplus as they did over the past few years. However, when adjusting for inflation, current surplus has still not recovered to the levels seen in early 2022, when surplus decline began. Additionally, given the ever-increasing impact of extreme weather patterns, and new exposures and risks such as cyber, a higher level of surplus may be required.

“While there are some positive signals in the 1H2024 results, insurers are still recovering from significant underwriting losses in recent years,” said Robert Gordon, senior vice president of policy, research, and international at APCIA.

“Insurers’ underwriting income swung from a \$22.6 billion loss in the first half of 2023 to a \$4.7 billion gain at 1H2024. Insurers’ surplus is continuing to recover from the catastrophic losses in 2022, although it has not kept pace with inflation or the economic demands for insurance coverage. Commercial lines have been profitable and are restabilizing, while personal lines have improved but are still struggling to keep up with rising losses. With an expected spike in hurricane season activity in the forecast and the remaining months of wildfire season still ahead, it remains to be seen if insurers

can finish the year with an underwriting profit after two straight years of underwriting losses.”

- **Premiums written:** Insurers wrote \$463 billion in premiums during the first half of this year, compared to \$420 billion during the same period in 2023. Similarly, earned premiums grew 11 percent to \$436 billion for the first half of 2024.
- **Underwriting gain:** The estimated U.S. insurance industry net underwriting gain of \$3.7 billion is an improvement over the \$23.4 billion loss reported at this point in 2023, and \$5.6 billion loss in 2022.
- **Incurred losses and loss adjustment expenses** increased by 2.2 percent, while earned premiums grew by 11 percent in the first half of 2024. The combined ratio, a crucial measure of profitability for insurers, was 97.6 percent during the first half of 2024 versus 104.2 percent for the same time period in 2023.
- **Surplus:** In the first half of 2024, the policyholders’ surplus increased slightly from \$1,014 billion at the end of 2023 to \$1,070 billion; however, insurers’ rate of return on average policyholders’ surplus, a crucial component of overall profitability, increased to 9.1 percent in the first half of 2024, up from 3.6 percent at the end of 2023.

“After years of consistent losses, premium growth is helping the overall industry move towards stabilization, with positive first-half underwriting gains for the first time since 2021,” said Saurabh Khemka, co-president of underwriting solutions at Verisk. “To maintain this momentum, it is critical we continue to address the evolving risks that challenge society today, especially the factors that continue to drive increased personal auto and homeowner rates.”

The first half of 2024 saw an increase in non-traditional catastrophe activity, characterized by numerous smaller convective storms.

Khemka added: “This trend, which began in 2023, contrasts from the larger, individual catastrophe events we have historically experienced later in the year. Looking ahead, insurers must prioritize actionable insights and analytics to understand and help fuel a healthy insurance industry, which is pivotal to protection of policyholders.”

The preliminary 1H2024 property/casualty insurance industry results shown in the table below represent consolidated estimates derived from annual statements submitted by insurers to insurance regulators. These results are based on approximately 91 percent of all business underwritten by private U.S. property/casualty insurers.

Note: *The results above are based on annual statements filed with insurance regulators by private property/casualty insurers domiciled in the United States, including reinsurers, excess and surplus insurers, and domestic insurers owned by foreign parents, and excluding state funds for workers' compensation and other residual market insurers, the National Flood Insurance Program, and foreign insurers. The figures are consolidated estimates based on reports accounting for about 91 percent of all business written by U.S. property/casualty insurers. All figures are*

net of reinsurance unless otherwise noted and occasionally may not balance due to rounding.
