

Liquid Fuel Usage - O.Reg 88/22

As per O.Reg 88/22 s.41, Petro-Canada Lubricants Inc. (PCLI) is providing information on the Company's website regarding liquid fuel usage. Liquid fuel is used at nominal charge in the plant's two boilers under normal operations. Nominal amount of liquid fuel usage is necessary in order to ensure ability to address any emergency situations that may occur as well as to respond in a timely way to any shortages in natural gas supply. Liquid fuel was used regularly since the regulation came into effect.

In accordance with O.Reg 88/22 s.18(4)(d), PCLI has transitioned to liquid fuel that has a total sulphur content of 0.5 per cent or less by weight.

PCLI's ability to avoid the use of liquid fuel in its entirety is dependent on external factors such as the natural gas pipeline capacity supplied to the facility by others.
