# Alcoa Gains Approval to Market Sustainably Produced Products with Aluminium Stewardship Initiative (ASI) Certifications

**PITTSBURGH, February 19, 2020** – Alcoa Corporation, a global leader in bauxite, alumina and aluminum, today announced that the Aluminum Stewardship Initiative (ASI) has certified the Company to market products under ASI's Chain of Custody standard.

ASI has the industry's most comprehensive system for third-party certification of sustainable manufacturing practices. The global non-profit includes multiple stakeholders in its certification process, including producers, users and civil society organizations. The Chain of Custody (CoC) certification and its performance standards provide independent, third-party validation and traceability of responsible production, sourcing and stewardship of aluminum.

"The certifications to the ASI Performance and Chain of Custody standards will offer our customers additional assurance of our commitment to responsible and sustainable production while complementing our existing Sustana™ line of aluminum products," said Alcoa President and Chief Executive Officer Roy Harvey. "Today's announcement aligns with our strategic priority to advance sustainably and it serves as another reinforcement of our strong reputation and industry leadership."

Alcoa's Sustana™ products includes Ecolum™ with less than 2.5 metric tons of carbon per metric ton of aluminum, which is 75 percent better than the industry average, and Ecodura™ billet cast with at least 50 percent recycled content in various alloys and sizes.

Alcoa now has 10 locations on four continents certified under ASI's standards. Alcoa's first production facilities were certified to ASI's Performance Standard, a prerequisite to CoC, in 2019. The Company has earned certifications for three bauxite mines in Brazil and Western Australia, four alumina refineries in Brazil and Western Australia, and three aluminum smelters and casthouses in Europe and North America. The latest facility to earn the Performance Standard certification is Mosjøen in Norway.

"Alcoa is one of the founding members of ASI, and has played an active role in supporting ASI's goal of responsible aluminium production," said Fiona Solomon, ASI's Chief Executive Officer. "Alcoa's work to earn Chain of Custody Certification from bauxite mining through to smelting and casthouse operations gives a further boost to the potential global production of responsibly produced ASI Aluminium."

Last month, [Alcoa announced certifications](#) for all of the bauxite and alumina refining assets in Western Australia and additional locations are currently going through the review process. The ASI certifications amplify Alcoa's strong leadership in sustainability – the Company was recently named the industry leader in the Sustainability Yearbook 2020, has [earned third-party recognition](#) for its environmental, social and governance performance, and is also a [member of the International Council of Mining and Metals](#).

**About Alcoa**

Alcoa (NYSE: AA) is a global industry leader in bauxite, alumina, and aluminum products, and is built on a foundation of strong values and operating excellence dating back more than 130 years to the world-changing discovery that made aluminum an affordable and vital part of modern life. Since developing the aluminum industry, and throughout our history, our talented Alcoans have followed on with breakthrough innovations and best practices that have led to efficiency, safety, sustainability, and stronger communities wherever we operate.
